Tuesday, March 20, 2018

## 2017 Serious Injury Reporting (SIR)

1. Provide you with the results from the 2017 SIR.
2. Tell you about the process for the Rapid Response Investigation and how to conduct your own.
3. Provide some brief Lessons Learned from the 2016 and 2017 SIR.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR 

## 2017 Serious Injury Reporting Requirements

Employers must report hospitalizations, amputations, and loss of an eye within 24 hours.

Effective date: Fed OSHA 1-1-16 and IOSHA 3-1-16

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## SERIOUS INJURY REPORTS CY2016 and CY2017

- 588 Serious Injury Reports were made in Indiana in 2016.
- 425 Serious Injury Reports were made in Indiana for 2017.
- In 2016, 178 of these included an amputation of a body part. In 2017, 185 of these included an amputation of a body part which is a 13% increase.
- 490 employees were hospitalized in 2016. This number decreased to 321 employees in 2017.
- 1 loss of an eye in 2016 and 1 eye(s) lost in 2017

## Hospitalizations in 2016

**Slips, Trips and Falls was the No. 1 cause of hospitalizations reported to IOSHA in 2016.**

There were 75 incidents resulting in the following injuries:

- There were 11 arms broke due to falls.
- There were 10 legs broke due to falls.
- There were 10 ankles broke due to falls.
- There were 9 hips broke due to falls.
- There were 5 vertebrae broke due to falls.
- There were 3 feet broke due to falls.
- There were 2 fingers, 2 ribs, and 2 knee caps broke.
- There was 1 shoulder blade, 1 collarbone, and a wrist broke due to falls.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

# Hospitalizations in 2017

**Slips, Trips and Falls was the No. 1 cause of hospitalizations reported to OSHA in 2017.**

There were 71 incidents resulting in the following injuries:

- There were 4 arms broke due to falls.
- There were 24 legs broke due to falls.
- There were 12 ankles broke due to falls.
- There were 6 hips broke due to falls.
- There were 3 pelvic bones broke due to falls.
- There were 5 punctured/bruised lungs due to falls.
- There were 7 backs broke due to falls.
- There were 3 feet broke due to falls.
- There were 0 fingers, 19 ribs, and 1 knee caps broke.
- There was 1 shoulder blade, 1 collarbone, and 1 wrist broke due to falls.

# Ladders

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

# Conveyors

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## Hospitalizations in 2016

- In Indiana there were 26 number hospitalizations as a result of misuse of forklifts.
- In Indiana there were 20 number hospitalizations due to improper use of ladders.
- In Indiana there were 13 number hospitalizations as a result of getting caught in conveyors.
- In Indiana there were 11 number hospitalizations as a result of electrical shocks.
- In Indiana there were 11 number hospitalizations as a result of heat stress.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## Hospitalizations in 2017

- In Indiana there were 27 number hospitalizations as a result of misuse of forklifts.
- In Indiana there were 8 number hospitalizations due to improper use of ladders.
- In Indiana there were 7 number hospitalizations as a result of electrical shocks.
- In Indiana there were 1 number hospitalizations as a result of getting caught in conveyors. Although, belts and pulleys on the rise.
- In Indiana there were 4 number hospitalizations as a result of heat stress.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## SERIOUS INJURY REPORTS CY2016

- I OSHA did an onsite inspection on approximately 30% of the 588 serious injury reports
- Federal OSHA received 10,757 Serious Injury Reports and also conducted an inspection on 30% (3,261) of the injuries reported in calendar year 2016.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## SERIOUS INJURY REPORTS CY2017

- I OSHA did an onsite inspection on approximately 54% of the 425 serious injury reports.
- Federal OSHA received 11,844 Serious Injury Reports and also conducted an inspection on 30% (3560) of the injuries reported in calendar year 2017.
- Nationally, 24% of SIR involve amputations
- In Indiana, 43% of SIR involve amputations.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## INSPECTION VS. INVESTIGATION

When a Serious Injury Report is made to IOSHA, a supervisor reviews the information submitted and makes a determination based on agency policy whether the seriousness warrants an onsite inspection by a CSHO.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## INSPECTION VS. INVESTIGATION

The following must be assigned to an onsite inspection:

- The accident/injury is likely to occur again.
- The hazard still exists and could impact other workers.
- The hazardous situation could reoccur.
- The event reported was a catastrophic event involving more than one person injured or that resulted in a traumatic injury such as paralysis, third degree burns, or long term hospital stays.
- Amputations regarding machine guarding, lock out/tag out violations, or light curtains.
- The hazard is an imminent danger like a gas leak or a chemical leak.
- The employer is on the SVEP list or a frequent flyer.

INDIANA DEPARTMENT OF LABOR

## INSPECTION VS. INVESTIGATION

**Inspection**: CSHO will go to the site and conduct an inspection.

The inspection will include:

- An opening conference
- Walkaround-photos/video
- Interviews of EE's and Management
- Closing conference
- Possible issuance of citations

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## INSPECTION VS. INVESTIGATION

The following will be processed as a Rapid Referral Response:

- Slips, trips, and falls (unless see item #1-#4 above).
- Smashed fingers in doors.
- Forklift crashes (unless see item #1-#4).
- Material handling injuries.
- Motor Vehicle Accidents investigated in Indiana State Police or other regulatory enforcement authorities, unless worker protection issues are identified.
- Natural Causes-heart attack, stroke, or seizure with no direct tie to job duties.
- Secondary infections resulting from a minor injury (cut finger gets infected).
- Events unlikely to reoccur such as infections of previous minor injuries.
- Isolated events like slipping on ice.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## INSPECTION VS. INVESTIGATION

### Rapid Response Investigation (RRI):

Employer will be sent forms and a questionnaire to complete and conduct their own root cause analysis.

(sample form letters provided)

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## INSPECTION VS. INVESTIGATION

### Rapid Response Investigation (RRI):

The employer must perform a root cause analysis, describe the corrective actions taken, and provide documentation. The documentation should include photos, invoices, training sign-in sheets, etc.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## INSPECTION VS. INVESTIGATION

### Rapid Response Investigation (RRI):

A Root Cause Analysis is a determination of what happened to cause the serious injury.

- This may involve employee/victim/witness interviews
- Employers have also used computer logging history of machines
- Security videos have been used to see the incident.
- Walk around of incident location

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## INSPECTION VS. INVESTIGATION

- 415 Rapid Referrals investigations were requested of employers in 2016 by IOSHA
- 192 Rapid Referrals investigations were requested of employers in 2017 by IOSHA
- Call INSafe to get help if needed and the employer will get an extension of time to respond to the RRI while working with INSAFE

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## INSPECTION VS. INVESTIGATION

### Rapid Response Investigation (RRI):

IOSHA will review the response submitted and make a determination if the response submitted was adequate/satisfactory.

If the response is satisfactory the file will be closed. However, if the response is not satisfactory, then the employer will be asked for additional information or a CSHO may be assigned to go out.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## LESSONS LEARNED

- Perform walk arounds to make sure floors are cleared of trip hazards.
- Ladder training is essential for a good safety program.
- Forklift certification and supervisory monitoring needed.
- Authorized/Trained employees list posted on the machine.
- Lock out/Tag out procedures posted on the machine.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## MORE LESSONS LEARNED

- EE's just reaching in for a tool, unjamming the equipment, clearing a conveyor were common causes of amputations/injuries. Employees need reminded to resist the urge and follow LOTO procedures or contact an authorized person to perform LOTO.

Tuesday, March 20, 2018

INDIANA DEPARTMENT OF LABOR

## MORE AND MORE LESSONS LEARNED

- Parts too small for the piece of equipment exposes employees to a greater hazard.
- Safety stand downs a must!
- Disruption of normal routine-shutdowns
- Monitoring/Audits with a checklist must be ongoing by EVERYONE!
- Facility Wide guarding assessments for pinch points, conveyors, belts pulleys.
- Use of Cameras, plexi glass, for maintenance troubleshooting-it's required!

## 2018 IOSHA SERIOUS INJURY REPORTS

1 Hosp

Employee walking on elevated walkway tripped and fell at same level striking his upper torso on the mid-rail of the walkway handrail system. Employee was evaluated at a local ER and it was determined the employee received 4 cracked ribs resulting from the fall. Employee was released and instructed to follow up in two days.

1 Amp

As there were no witnesses to the incident, what follows is the employee account of events leading to the injury. Employee was at the pack station in End Cover Assembly. He had a defective assembly that employee was taking to the rework cage. When employee went around the corner of the conveyor, the employee indicated that they slipped and fell to the floor. Employee was holding the part with both hands and he fell forward onto the floor. The employee indicated that when he fell, employee right pinkie finger was pinched between the part and the floor.

1 Hosp

Employee was retrieving a box of meat from top shelf as employee was coming down the ladder she fell. Employee suffered head, hip, shoulder and wrist injury

1 Hosp

An employee suffered hot water burns to 15% of their body surface (abdomen, right thigh, right forearm, and lower back) when the kettle was opened during an automatic washing cycle.

2 Hosp

Two burned from flash fire at manufacturing facility.  
Names of the two injured employees have not been released.  
UPDATE: Names added

1 Amp

An employee suffered an amputation of the right ring finger, with possible additional amputations of the right index and middle fingers, during operation of a Verson press using the treadle foot control.

1 Amp

Employee reached their hand past the safety guarding into a gut separator. Employee suffered finger tip amputation.

Employee rolling backpack got caught on leg of barricade. Employee lost balance while bag came loose causing employee to fall to the ground.

1 Hosp

Employee was packing springs when index finger on right hand was crushed.

1 Hosp

Employee was standing on a sheet of plastic when a forklift truck drove over the same plastic sheet. The sheet shifted causing employee to lose balance and fall. Employee suffered broken femur

1 Hosp

Employee was walking into work and fell on a patch of ice

1 Hosp

Employee injured left foot when he attempted to stop the lift truck with his foot

1 Hosp

Employee was in the field doing a hook up to main drainage. dirt the size of a 5 gallon bucket came out of sidewall and hit employee in the back

1 Amp

Employee was using an ironworker shear machine to make a cut on a piece of metal. Employee placed left hand on the piece of metal. Employee suffered partial amputation third finger left hand

1 Hosp

Employee cut finger and was then observed by a nurse to be in need of assistance and then was taken into ER facility and admitted.

1 Hosp

Pathologist was pushing cadaver into body bag when he noticed a "prick" to employee's right thumb. Upon removing double gloves employee noticed a shallow puncture wound on their right thumb and a tiny sharp black rock attached to right glove. Employee cleansed the area with disinfectant soap. By the next day employee noticed redness and swelling so employee sought treatment at local hospital ER. Employee was admitted for 48 hours for IV antibiotic therapy. Diagnosis included Synovitis, Tenosynovitis, Sepsis.

**1 Amp**

Welder was working in Weld Booth #3 where he was attempting to insert an exit plug into the exit of a 501DA Transition. The welder was following the instructions on the MORI which state "Insert Exit Plug and Tack Weld into Position". The exit plug weighs 46 Pounds and the fit between the plug and the exit is very tight which requires welder to have to use a hammer to pound it in. The welder managed to get the exit plug approximately halfway into the exit before he had to complete the operation with the hammer. The welder received a laceration to the fingertip and the distal phalange of left index finger was broken.

**1 Hosp**

Employee was filling a propane tank and went to start their truck to warm it up and on their way back slipped on some ice. Landing on their knee and broke a bone behind it.

**1 Hosp**

An employee was removing a stuck bolt with a crow bar from existing equipment and fell 25 feet to the ground suffering multiple fractures, lacerations, and head trauma.

**1 Amp**

An employee suffered a right index finger tip amputation from a pneumatic hold down clamp.

**1 Hosp**

A piece of building façade fell and injured a construction worker at Washington Square Development LLC

**1 Hosp**

Employee slipped and fell on ice in parking lot when walking from employees vehicle to the building to start their shift.

**1 Hosp**

Employee was watching a combination wrench he rigged to an overhead crane to remove a bolt when the wrench slipped off the bolt and flew back striking employee over left eye.

**1 Hosp**

Caller is wanting to report the inpatient hospitalization of an employee. The incident occurred on January 10th. Caller stated that a piece of stone rolled over onto the employees' leg, due to this incident the employees' leg was broken.

**1 Hosp**

Employee was stacking a large bundle on top of small bundle. As operator got off lift the stack fell onto operator

**1 Hosp**

Employee was in the porta john and a block wall from above came down on top of restroom porta john. Employee has a broken sternum after concrete block fell on porta john.

**1 Hosp**

Employee was watching the back of a semi and a wind gust blew the semi trailer door unlocking it from the open position and swinging it closed hitting the employee. Employee suffer lacerations to the head and a fractured pelvis.

**1 Hosp**

An employee was using crane to transfer a bundle of steel bar stock onto the loading bed. The employee was caught between a bundle of steel and a safety wall. Employee suffered a punctured lung, collapsed lung, bleeding on stomach and two fractures of the spine.

**1 Amp**

An employee suffered a left finger tip amputation during maintenance activities on a bread oven conveyor chain.

**1 Hosp**

Employee slipped on ice entering the rest area building.

**1 Hosp**

Employee fell off back dock after they tripped over a mop head.

**1 Hosp**

Ladder slipped from under employee. Fell to floor.

**1 Amp**

Employee was ripping a 4 1/2 inch piece of wall panel from a 36x80 inch piece of stock. While cutting the panel, employee was facing toward another employee while talking to them. Employee's finger lifted the guard on the saw blade and then contacted saw blade. Employee suffered amputation to right ring finger tip.

1 Hosp

Employee received lacerations to the left arm, right underarm, and back during the cleaning of a mixer blade.

1 Hosp

Walking on dock, tripped over steel on floor, fell off onto parked TSI truck below.

1 Amp

An employee suffered amputations of the left index and middle fingers at the cluster fiber machine.

1 Hosp

Employee was making a routine delivery to a liquor store. Employee had several cases of beer on a dolly and was waiting in the parking lot for the delivery door to open. During that time the employee shifted his weight the wrong direction, lost his balance which resulted in a fracture to his leg above the ankle. An ambulance was called and the employee was taken to the hospital where it was confirmed that the Employee had broken their leg.

1 Amp

Injured employee was entering a trailer. As he was entering, he placed his hand on the door hinge. At the same time, another associate moved the door. This caught the injured associate's finger between the hinge and exterior door post. When employee's finger was caught by door hinge, it caused an avulsion of the finger pad skin. In order to close the wound, a surgical amputation of the fingertip was required. Employee is doing his normal job going into a trailer.

1 Amp

Employee was erecting a tent, Employee placed their hand in the wrong place and slipped and fell. The tip of employee's finger was amputated.

1 Hosp

Employee was working on installing striping on a slide out room as the set crew ran the slide out to the outer position prior to the stops being installed. The slide out room fell off the track on top of employee

1 Hosp

Employee was utilizing open ended wrench to fasten lid to mixer. Wrench slipped off one edge of the nut causing the employee to strike their left pinky finger on a metal obstruction. Immediate injury was apparent laceration with potential fracture / crush of the tip of the left pinky finger. Employee was provided with options from the physician to receive treatment in the form of closure of injury, or to undergo medical treatment removing damaged tissue and potentially portions of the bone from the afflicted appendage Employee elected to undergo the latter surgical intervention as treatment for the injury.

1 Hosp

Employee's arm was injured while they were assisting another employee with threading a pipe. The employee's arm got caught in the rotating part and got wrapped around the pipe. Paramedics were called and hospitalization was required.

1 Amp

An employee suffered amputations to three fingers on the South Porter Saw #103.

1 Amp

Temporary agency employee supplied by Aerotek was working with a groover machine, attempting to check the depth of the groove with a scrap piece of pipe. Employee was wearing a pair of leather gloves. Employee's right index finger was caught in grooving machine.

Employee was opening a box and set on the edge of a bin. He opened the box using a utility knife and was not wearing PPE, box started to fall and employee fell at the same time employee went to grab the knife was cut on their left wrist.

1 Hosp

Employee was pumping gas and tripped or mis-stepped and fell backwards into the side of the service truck. Employee hit their back. Employee was seen the day of the accident by an occupational health center physician, employee's pain became worse and was reevaluated on 1/25/17 when employee was referred to hospital for emergency evaluation. Employee was admitted to hospital for surgery for damaged lumbar disk. He remained hospitalized 2 nights and then was released.

1 Amp

Employee reached behind guard to pick a piece of tape off the piston when he thought it was off. As he did this the shaft was aligned and so the piston extended and latched on to the mandrel crushing the tip of his right index finger

1 Amp

Employee was assisting another employee check belts on sheave. Employee grabbed the belt as it was turning and got his finger caught between the belt and sheave causing amputation of part of right ring finger

1 Amp

Employee reached into machine (lifter) that lifts shock outer shells into the length checker and caught right thumb in a hole in the stationary vertical plate severing his thumb at the distal joint. A part apparently fell off and employee was putting it back on the lower shelf of the lifter which was still operating.

1 Hosp

Bloomington police was notified that the cashier on duty employee was found unconscious in the managers office, with a needle in employee's left arm. Police arrived and took employee to hospital which we believe it was Bloomington ER and admitted to the IU. Police suspect an overdose.

1 Hosp

An employee suffered an electric shock while tightening the bolts on the flanges of an autoclave heat exchanger.

**1 Amp**

Employee was trouble shooting a machine and reached into a belt pulley drive area without deenergizing. Employee touched the belt which started to move and immediately amputated employee's two fingers.

**1 Amp**

At approximately 5:45 pm on Wednesday January 25th, the Employee sustained a foot injury while backing up fork lift out of a pick aisle in the warehouse with left his foot outside the envelope of the equipment. As he backed up he cut the corner tight and pinned his foot between a column and the side of employee forklift.

**1 Amp**

Employee was manually turning the pull collar by grabbing the top shaft and rotating it toward their body. Employee hand slipped off the shaft and their fingertip got pinched between the shaft and the pull collar. Amputated the tip of his ring finger on right hand. ER x-ray indicates it didn't sever the bone on the fleshy tip.

**1 Amp**

Employee suffered partial amputation due to finger being crushed between an end pusher plate and a stack of wall board.

1 Hosp

Employee felt severe chest pain and dizzy (employee description - "He saw black") and fell down 8 steps. He was transported to the hospital by ambulance.

1 Hosp

Employee was getting into the back of the truck and slipped and fell off landing on their back.

1 Hosp

Caller is reporting that on January 27 a 2:30 PM a 70 year old security officer employee fell and broke 2 ribs. Employee was admitted to the Methodist hospital in Indianapolis, IN.

1 Hosp

Employee suffered 4 broken ribs and a small cut on their liver due to backing up into a die storage cart trying to avoid being splashed by the caustic tank.

1 Hosp

Employee lifted a box of fish and chicken and got a hernia.

NO MSDS

No gloves for filtering

NO back support belts

**1 Amp**

While preparing food employee using a knife when he amputated the tip ( approximately 1/8" ) of the left middle finger.

1 Hosp

Employee went to take a break to get some water. Employee fell to the floor.

1 Hosp

Employee went to the bathroom and they had a seizure and was found by the house keeper. Employee refused to go to the hospital family member came to get them in the locker room they had another seizure and then was taken to the hospital.

**1 Amp**

Employee placed hand beyond designated guard. Employee crushed left index, middle, and ring finger between two rollers. Employee suffered left index, middle, and ring finger amputations.

1 Hosp

Teammate got a welding wire stuck to their hand. Employee was sent to the hospital to check for an infection. The teammate was placed on an antibiotic and kept overnight, as a precaution, to make sure the infection went away. Teammate was released this morning to home and with oral antibiotics.

**1 Amp**

Employee was up in a lift working with a 40' stud and the lift retracted amputating part of the left ring finger first knuckle.

**1 Amp**

Caller is reporting that a technician placed a pipe in a saw-jig. When the clamp came down it caught his right index finger pinning it between the clamp and the pipe. Employee was taken to ER. They could not save part of employee finger and it was amputated between the first and second knuckle of his right index finger.

**Hosp**

Employee was in a trailer unhooking support straps when a forklift entered and hit a pallet which pinned their left ankle between the pallet and the side of the truck breaking left ankle.

**1 Hosp**

Employee lost their balance and leaned against a railing and the railing failed and employee fell to the ground about eight to ten feet.

**1 Amp**

An employee suffered an amputation to the right and left index fingers during the operation of a press brake.

**1 Amp**

While attempting to clean the machine and dislodge debris, employee's hand was pulled into a roll assembly injuring three fingers.

**1 Hosp**

Caller is from Calling to report an accident that occurred on 1/27/2017. Caller states that they were just informed by the hospital that this is going to be considered an amputation which was not their original report.

**1 Hosp 1 Amp**

Employee was about to place preblow in machine, foot slipped and smashed thumb.

**1 Amp**

Employee was helping another employee set up a job and told the operator to start up the job while his hand was resting on a pinch point area.

**1 Hosp**

The employee was walking across the production floor shortly after lunch when employee tripped on a guide rail that sticks up approximately 1 inch. The rail is a transfer line to move material carts in the production process.

**1 Hosp**

Returning from an approved trip from Florida he stopped to get gas. He slipped on ice from a standing position and struck his head.

**1 Hosp**

Warehouse picker trainee lost balance during a turn while using an electric pallet jack. Employee left leg was between pallet jack and a rack which caused an injury

**1 Amp**

Our injured employee was placing material into a fixture. A second employee engaged a clamp that caught the injured employee's finger resulting in a crush injury.

**1 Hosp**

Caller is reporting an employee was hospitalized and had some work done on his arm. Employee misstepped on a ladder and when he caught himself he injured his arm.

**1 Hosp**

Employee reportedly fell approximately 20-25 feet while assembling tube and clamp scaffolding.

**1 Hosp**

Supervisor was using a backhoe to load fire hydrant into the back of the truck when it became detached from the lifting strap used to hoist it. Falling to the ground and tipped over on employee's leg.

**1 Hosp**

Cleaning chemical was still in the beer line and the employee tasted some of it and was burned.

**1 Hosp**

An employee was intervening in an altercation between two patients. Employee states that one of the patients tripped over the bed and pulled employee down by his arm **separating his left shoulder**.

1 Hosp

Employee was traveling from our Seymour location back to the Columbus location. They were exiting off of SR 11 on I65 when they came into contact with a tractor trailer. Employee was transported to St. Vincent Hospital for **in patient care**. Incident is still under investigation.

1 Hosp

Employee was walking between 2 tables when their foot got caught in a peer's wheelchair. Employee fell to the ground, and a snapping sound was heard by the supervisors in the area. Employee **left leg/lower calf** looked to be severely injured and at an irregular angle. Employee was transported to hospital by ambulance.

1 Hosp

Employee has worked for company for 13 years and we accept that the **hernia** is most likely work related. Employee has had 2 previous hernia surgeries. Employee was not hospitalized at the hernia surgery but developed complications that brought employee to be admitted February 14th, 2017. The insurance carrier notified me today at 1:50 pm.

**1 Amp**

Employee was **cutting meal plates, using air shear**. **Amputated the top of employee right thumb above the knuckle**.

A unit of corrugated sheet fell on an employee while loading a trailer. Causing **neck and back injuries**.

1 Hosp

Employee had an **allergic reaction** during a catered evening for the Miller College of Business.

1 Hosp

Team member was behind building, there was a curb and when team member went to step up onto the curb he missed the step and fell. Team member **injured his (R) hip, (R) shoulder and (R) knee**.

**1 Amp**

Employee was cutting 1" foam on table saw and did not use push stick. Material kicked back and pulled finger under guard. Amputated tip of index finger on left hand.

1 Hosp

Foot tangled in phone cord. Stood up to walk, **tripped and fell** due to phone cord.

1 Hosp

An associate was counting parts in containers in the cold press area of the facility. The associate was between stacks of containers and then moved to into the walking aisle. As the associate moved into the aisle, a fork lift drove by. The associate was with one other person, who saw the fork lift coming, so they yelled out to the associate. The associate then turned around, with their back facing the aisle. The **mast of the forklift hit the associate in the leg and knocked them down**. The fork lift stopped immediately after noticing they had struck the employee. The fork lift came to a stop on top of the associates' foot, so the fork lift operator had to back up off of them. An ambulance was called immediately. First responders came to the scene and assisted as necessary. The associate left on the ambulance to go to the hospital for further evaluation and treatment.

1 Hosp

Employee was reaching under counter for items to stock product when a can of PAM sprays seal broke and it ignited and the **employee was burnt**.

1 Hosp

Employee **burnt their feet** when they stepped into molten lead.

**1 Amp**

Employee was **inspecting exhaust blower unit on a laser cutting machine**. power was off but employee **grabbed fan belt before motor stopped**. employees **left index finger** was then caught between drive belt and pulley. **finger tip** was not able to be reattached

1 Hosp

Employee was walking along top of berm to get to next work location. Employee drop their garbage bag and slipped on the gravel which caused him to **break his leg**. The Employee was transported to St. Catherine hospital in East Chicago IN where employee had an operation to fix the broken tibia fibula.

1 Hosp

Employee was headed to Community South for site visit. **Ran light and was T-boned hit on driver's side door**.

1 Hosp

Caller is reporting the hospitalization of an employee who tripped over a pallet and **broke their hip**. Employee had hip replacement surgery this morning.

1 Hosp

Employee was moving a curtain and the pole hit the stile and employee jumped out of the way but employee's leg and broke it.

**1 Amp**

Employee reached in front of another employee into the point of operation of the machine that was about to cycle. Employee suffered amputation to left index finger tip.

1 Hosp

A Team Member was walking along the north end of Extrusion Press 4 in the process of conducting various troubleshooting activities. Another Team Member was mopping the same area. As the first Team member finished crossing over an elevated platform, they lost their footing on the far side, resulting in a fall. The Team Member landed on their right side, ultimately resulting in a fractured hip.

1 Hosp

Employee was walking around in the live bird receiving area when a forklift hit her and ran over her leg. Employee suffered fractures in lower right leg and possible fracture in left leg.

1 Hosp

Employee became short of breath and reported to the hospital and was admitted.

1 Hosp

Employee kicked the frame of the bed to let down the patients bedrail. Employee PPE or clothing got caught in the bed rail button, she twisted and fell flat on the floor causing left hip to break.

**1 Amp**

Employee was breaking block for retaining wall and caught finger in between boulder and block, cutting off approximately 1/2 inch of finger

1 Hosp

Caller reported an incident that had occurred in which an employee hurt their back. Employee was working in the back by lifting 50 lbs bags in which employee hurt their back. Employee reported to supervisor but employee denied medical treatment instead employee left work early. Caller stated that they spoke to supervisor today in which they stated that employee was hospitalized overnight for lower and upper back pain at Saint Joseph Hospital.

**1 Amp**

Employee caught their right index finger in a profile roller. Finger was partially amputated at the hospital.

**1 Amp**

Employee was reaching for a wire and the ladder kicked out from over him so he went to grab the back hang and caught his finger and ripped it off

1 Hosp

Employee was burned by molten iron. Left leg and foot.

1 Hosp

Employee was repairing a piece of equipment and got his left hand caught.

1 Hosp

Employees were doing a set up on a press. Set up operators were ready to pull small sections of the die and needed to use the 18,000lb forklift. The driver of the forklift stated they honked their horn before backing up but did not see the victim. Forklift ended up running over their foot.

1 Hosp

Employee had an injury resulting in a hospitalization.

Potential fractures to fingers and arm.

1 Hosp

Employees were traveling on Highway 74 when a wind gust blew them and several other vehicles off the road. Their truck rolled over several times ejecting the driver and the passenger. Neither the passenger nor the driver were wearing their seatbelts. Employee was care flighted to Saint vincent hospital

**1 Amp**

During the manufacturing process of plastic lids, a temporary worker reached into a bowl to retrieve a lid that was stuck. Employee neglected to press the E-Stop button to stop the moving equipment employees right, middle, finger was crushed and cut by the moving parts.

1 Hosp

Employee was walking through the plant on their way to the break room and received a laceration on head from a forklift.

1 Hosp

Employee was walking on top of some super sacks of finished product verifying the material type in certain bags. Employee tripped or lost their footing and fell 5 feet to the floor **hitting their head**.

1 Hosp

Employee slipped and fell at the same level, resulting in **fractures to tibia and fibula**

**1 Amp**

The associate was **loading a single spindle drill press** with an aluminum extrusion that was being processed. **Injury to the right index finger** was caused by **entanglement at the point of operation** due to the use of cut resistant gloves when the associate was operating a drill press.

Employee sustained **liquid propane burns** to his stomach area.

1 Hosp

Employee was operating an End Rider Pallet Truck and struck a conveyor with their leg resulting in **severe laceration and fractured femur**.

**1 Amp**

Employee was **cutting plywood on the table saw** and **cut approximately 1/4' off the tip of their right 3rd finger**.

**1 Amp**

Employee was **backing through an area that was very tight**. It appears that as they were backing up, they were **bracing themselves on the rear upright of the protective cage on the forklift**. In doing so, their finger was wrapped around the bar which created a pinch point between the forklift and anything outside of the roll bar. When the forklift and a stack of finished product met, their **finger was severed**.

1 Hosp

Employee walked out into the parking lot after clocking out and slipped on some ice and **broke their femur**.

1 Hosp

An unsecured piece of plywood was covering an access hole to an electrical vault. An employee moved the piece of plywood (I assume they walked forward with it.) and stepped into the hole and **fell about fifteen feet**.

1 Hosp

Employee while unloading tires at a stop and when dismounting employee lost their footing and landed on right side **fracturing their right hip and right wrist**.

**1 Amp**

Employee **amputated the tip of their left small finger** while **cutting one inch plywood on a table saw**.

1 Hosp

Employee slipped and fell on a patch of ice as they were exiting their vehicle causing **injury to ankle**.

**1 Amp**

An employee working on station 13 in department 5940 Valve Body had a **partial amputation of the right middle finger tip while unjamming part**

1 Hosp

Employee and supervisor had a disagreement about prepping the food for brunch when the employee became upset.

Employee had **chest pain possible anxiety attack**.

While **using a table saw to cut foam insulation** employees **index finger was severed**

1 Hosp

Employee was unloading a delivery truck of 4 light poles. Poles were stacked in an enclosed trailer as Tim was pushing light poles out of the truck they fell over and landed on his **right leg**.

1 Hosp

Employee was walking down stairs, mis-stepped and **fell onto knee**.

**1 Amp**

Employee was **trying to remove a packing knuckle from a bar**. The knuckle was stuck and after striking with a hammer the **employee grabbed the knuckle to remove it for the starter pin**. The knuckle shifted/rotted causing employee's **finger to be pinched between the knuckle and the fixed walking bed rake**.

1 Hosp

The Employee was using a hotel pan and **cut his forefinger** of his left hand.

1 Hosp

Employee was south bound on St Rd 135 approaching the intersection of Oliver Branch road heading south. A vehicle heading North at the last second entered the intersection to go west and pulled out in front of Employees vehicle. Employee **swerved and clipped the car** and hit the curb sending employees vehicle into a ditch.

1 Amp

Employee was **cutting material on a table saw blade** when he **reached across to the left side of the table saw with his right hand to clear cut stock**. Employee suffered an **amputation to right middle finger tip**

1 Hosp

Employee was shearing two pieces of metal side by side. The piece was positioned so the hold downs for the shear missed the piece. When employee cycled the machine the piece shifted and the end came up and struck him in the face. Employee suffered an **open fracture to the jaw** that required surgery.

1 Hosp

Employee stuck their fingers inside a sheet metal break after the "clear" was given. The brake closed on employees fingers(**four fingers did not amputate**).

1 Hosp

Employee trip and fell and received a **broken arm**.

1 Hosp

Employee spraying parts, **hand started swelling and sharp pain**.

1 Hosp

Employee reported squeezing sensation in chest and tingling of fingers. Transported by guard to local emergency room. Employee was admitted for testing for **heart attack/ other symptoms**. No confirmation from hospital at this time of heart attack. Some symptoms were present so employee was admitted for tests.

1 Hosp

Employee coming out of bathroom, opened bathroom door in towards employee and rain into the door with employee face, causing a **cut inside of lip**.

1 Hosp

Employee sweeping floor bent over and hit their head on th corner of the conveyor, **cutting of employee head**.

1 Hosp

Employee set a clamp on the press above themselves and the clamp fell hitting employee on the **head, causing a cut**.

1 Hosp

Employee suffered a **harte attack** while viewing the inside of a semi cab and fell to the ground **striking their head**.

1 Amp

Employee was **utilizing an air actuated punch to punch out plastics lids out of plastic sheet**. The employee had just released the two hand controls that had punched a lid and the load cell had retracted to its upward home position. As they **reached in to remove the lid, the load cell sheered from the platen and the platen fell striking the employees right index and middle finger**.

Employee set a slide out wall on a cart with his finger tip between the cart and the bottom edge of the slide out wall. Employee immediately reacted jerking their hand back ripping his finger tip off.

1 Amp

The employee was **cutting a piece of steel with an Accur Seer machine**. Employee **pressed the pedal to activate the machine and felt pressure on his left ring finger**. Employee immediately pulled his hand away and realized that something had **pinched the end of employee finger**.

1 Amp

Employee recived severe injury to **right hand** resulting in surgery leading to **amputation of hand** and hospitalization.

1 Hosp

Employee was stocking their phlebotomy cart and when they bent down to put blood culture bottles on th ebottom basket, the employee felt a **pulled muscle in their back**.

1 Amp

While employee was running a forging hammer employee put their left hand in the point of operation and crushed their left hand. Partial amputation (not whole hand).

**1 Amp**

while servicing a garbage container the employees left thumb got caught between container and the thruck. Resulting in a partial amputation.

**1 Amp**

Employee was moving material from the bolt making area to the next operation while driving a stand up forklift. As employee turned the corner with two tubs of fasteners it appears from the tire marks that the employee did not straighten course and ran into the front of one of the machines. Employee received a crushed foot with fractures resulting in amputation of second and third toe on the left foot.

**1 Amp**

As employee reached into mold to retrieve a finished molded part, the lifters inside the mold timed out and cycled pulling the part back into the mold pinching their left index finger between the finished part and the mold. The employee's finger was pinched in this position for approximately two to three minutes. A Toolmaker used a pry bar to release their finger. The injury the employee sustained was a burn to their left index finger.

**1 Hosp**

Employee's responsibilities were to hold the base of the ladder and carry the ladder from building to building. Employee was directed not to climb on roofs. When the supervisor left the job site the employee climbed on the roof with-in 10 minutes and fell off the roof.

**1 Hosp**

Employee was reaching outside the fork truck operating cage and pushing on a set of double stacked finished goods parts racks. The racks were not stacked properly and employee was trying to shake them so the top rack would fall into place.

**1 Hosp**

Employee was passing a sheet of decking around a column to another employee. Employee fell from height while installing decking sheets on a structural steel building.

**1 Amp**

Employee was riding on the back of a trash truck in a residential neighborhood. Employee placed their hand inside the hopper when the hopper was moving and the blade snapped his finger.

**1 Amp**

Employee was sliding a metal plate into a press by hand and pinched their right ring finger between the handle of the plate and the press. Finger tip of right ring finger was pinched near the first knuckle causing the finger tip to be pulled from the bone.

**1 Amp**

Employee was taking tape from the tape machine when it got stuck. Employee went to get the tape loose and that is when the automatic blade on the machine came down cutting her left index finger

**1 Hosp**

1. Employee was in the post surgical station and tripped over a chair and fell on to their right lower extremities.

**1 Hosp**

Employee was in the back of an ambulance and the ambulance was in an auto accident  
Employee was wearing their seat belt.

**Hosp**

Employee was removing bolt with ratchet. Ratchet slipped causing arm to go downward. Right forearm hit cotter pin causing gash on right forearm.

**1 Hosp**

Injury Description: Employee's hands/wrist areas were injured with one hand having some cuts on fingers and the wrist/arm area being smashed.

**1 Hosp**

Employee was walking across parking lot going into store to get food for a client food. Employee then took a missed step and somehow fell to the ground on her side. Employee drove herself to hospital where it was discovered she had fractured hip

**1 Amp**

Employee was cutting styrofoam with a table saw. He was wearing gloves. Employee reached sideways across the table to pull a piece of foam, and the blade snagged his glove pulling employees left hand into the blade

**1 Hosp**

A floop operator was cutting the bands on a steel coil and entered the coil rack. Once he cut the bands, the coil shifted and pinned his feet against the coil rack. The coil crushed his left foot and lacerated his right leg.

1 Hosp

to conduct work duties on an electrical utility line. The work duties that needed to be done were such as, but not limited to, relieving tension on the lines to straighten out the pole, move and set a new anchor for the guy lines, replace the pre-sets and johnny balls on the guy lines, and set the guy lines to the new anchor location. During the process of replacing the pre-sets, replacing the johnny balls, and moving the guy wires to the new anchor, the loose guy wire came in contact with an energized jumper and shocked an employee. The electrical shock required inpatient hospitalization for oversight and **burns on hands**.

1 Hosp

Employee was engaged in cleaning a tank that had chemical residue inside. The **residue ignited**. Employee was hospitalized

1 Hosp

Employee was **severely burned** and a warehouse was razed after a propane rail car exploded in East Chicago.

1 Hosp

Employee got **leg caught** between the apron of the wood chpper and a log.

1 Hosp

Employee was climbing down an extension ladder from an elevated platform (he was installing fire alarm devices). As he was climbing down the tie wires on the top broke and the **ladder slid out from under employee**.

1 Hosp

Employee **attempted to pust 2 wheeler under a caron on semi trailer** without adequate room to stand and perform the task.

**1 Amp**

Employee was **cutting off the end of a board with a circular saw**. Employee was **securing the board with his right hand and using a saw with his left hand**. As he was sawing the end off, the saw jumped and **cut the tip of his finger off**

**1 Amp**

Maintenance tech **pinched off half inch of left middle finger**. Employee **grabbed ahold of a machine with automatic moving parts**.

1 Hosp

Team member was walking into work and slipped on mud and employee **knee went back**.

**1 Amp**

Employee was **trying to unplug a flow to a feeder and bypassed solenoid and lid closed on employees hand**. Employee suffered a **partial amputation**.

1 Hosp

Employee was picking up product to put into cart. Employees foot got caught in shrink wrap that was on the floor. Employee fell on their left side and **fractured left femur**.

**1 Amp**

Employee was **bagging meat products in plastic bag with a metal fixture**. Employees **tried to catch fixture as it was falling and finger got caught between the metal fixture and the metal table** it was mounted to. Employee **finger was amputated**

1 Hosp

Employee states was going into closet and tripped over storage rack and **fell**.

1 Hosp

Employee possibly tripped and fell over wrinkle in the carpet in her office. It is unknown what actually occurred as the employee doesn't recall and there were not a witnesses present. Employee **hurt right hand and right side of the head**. Employee was kept in hospital for brain scan and hand x-ray. It is unknown if employee was in patient hospitalized at this time.

1 Hosp

The caller is reporting that they had an employee who was in town for a conference who was **hit by a car**.

1 Hosp

Employee slid off of a roof. Employee had thier harness on but the rope grab was to low. Employee hit scaffolding after sliding off the roof. Employee was kept over night **Brused leg and back**.

1 Hosp

An employee was trying to clear debris from a roller, their ring finger was caught and pulled into the rollers, and their **ring was crushed into the finger**. The employee was admitted to the hospital.

1 Hosp

Employee was accidentally sprayed with powdered lime material and inhaled some of the powder. Employee was admitted to hospital for observation.

**1 Amp**

Employee was working on 520 gauge when their arm hit the cylinder activation lever which caused clamping device to pinch their left ring finger in the clamp. Employee sustained fingertip amputation and fracture to left ring finger.

**1 Hosp**

Approximately four employees were lifting out a wedge assembly from a 505-06 press pit. The employee in the pit welded eye bolts to the wedge assembly so it could be lifted out. As the wedge assembly was being lifted out of the pit, it got caught on the side of the press legs. The employee in the pit tried to move the wedge assembly when the weld to the nut that was holding the eye bolt broke, causing the wedge to fall on one side. This resulted in smashing employees left arm and left index finger.

**1 Amp**

Employee was servicing a machine. In the process, they removed the barrier guard and reached into machine without performing lockout/tagout. The employee's body activated the press and his right finger got caught and smashed in the die on the down cycle. The employee's finger required amputation.

**1 Hosp**

Tripped on therapy mirror and landed on the floor. Left intertrochanteric proximal femur fracture.

**1 Amp**

Employee was reaching into pallet wrapping machine trying to get the cut arm to go back into the socket. Employee pushed the retract button and bent down to push the arm back in and it cut his index and middle finger

**1 Amp**

The caller is reporting that last week a gentleman was pushing a cart and his finger was smashed between the cart and machinery. The caller states that the employee was from a Temp agency and they just got the report stating that the employee received a slight amputation of the fingernail and the tip of the finger.

**1 Hosp**

Employee was operating a press form machine and stacking parts when the stack of metal sheets fell onto the top of Their left foot (behind the steel toe plate fracturing the metatarsals). Employee saw a specialist, Dr. Pagano, who did not feel surgery was needed at that time.

During a 04/25/17 follow up at the clinic of employees left foot fracture and there was concern of a blood clot. Employee was sent to Elkhart General Hospital for an ultrasound which revealed employee did have a deep vein thrombosis and was admitted. While there, they found two pulmonary embolisms and performed an magnetic resonance imaging of her brain to check for blood clots there.

**1 Hosp**

Employee fell off the scaffolding approximately thirty feet.

**2 Hosp**

Two employees sustained injuries as a result of an incident at an electrical power distribution center inside the refinery.

**1 Amp**

Worker jammed a button into ON position, reached into machinery, and got his hand pulled into a slit. His hand was amputated

**1 Hosp**

Employee was taking bubble wrap out of a trash barrel to put into a trash bag. Employee was placing bubble wrap on the floor and they got tangled in it. Employee broke their fibula in right leg after getting wrapped up in bubble wrap.

**1 Amp**

Two employees were working together to adjust shelf height. One employee dropped the end of the metal shelving beam causing it to come down on the finger of the other employee. Injured employee suffered a partial amputation to left pointer finger

**1 Hosp**

Employee was operating an asphalt paving roller crossing a 30mph road to transport the roller from one job to another. A speeding car hit the front right side of the roller. Employee was ejected from the roller and suffered stitches to the head, broken ribs and a broken knee cap

**1 Hosp**

Employee was driving PIE and had foot sticking out from platform and struck foot on shelving and injured left foot.

**1 Amp**

Employee was pushing material through the table saw and got his finger to close to the blade. Employee suffered soft tissue amputation of distal 4th finger tip.

1 Hosp

Employee driving pallet jacket ran into barrier while trying to turn a corner in the warehouse. Lower ankle was seriously cut and employee was transported to the hospital.

**1 Amp**

Employee received a distal tip amputation to the right thumb. Employee was laying a slide down on a table when the spring snapped compressing the slide against employees thumb

1 Hosp

Driver was hooking up dolly with his hand in front and when he put it in to the trailer his finger got caught in trailer. When employee pulled his finger away his skin was removed from his right pinky finger.

1 Hosp

Employee was moving inventory. Employee fell from shelf ,causing multiple fractures to multiple parts of his body.

**1 Amp**

Employee removed guard and reached in to clean foreign object from Lickerin assembly. Gears grabbed their glove and partially pulled in hand/arm. Employee suffered severe laceration of left forearm and three fractures to fingers of left hand.

**1 Amp**

Two employees were unloading steel ductwork sections from a semi-trailer. One piece of ductwork fell while being unloaded and landed on an employee's foot. The employee was taken to the hospital.

1 Hosp

Associate states was bending over to help lift a patent when employee felt a "pop" in lower back. Employee states instantly loss of vision and hearing became muffled. Associate denied loss of consciousness, reports it took about 30 minutes to feel better and regain of vision. Employee state when standing up again, the same thing happened. Associate states blood pressure was checked and it was 80/50 with Heart Rate in 50s, which is unusual for associate. Multiple tests were ordered and Emergency Room physician decided to admit associate to hospital.

**1 Amp**

Employee was making latch boxes using drill press and amputated left middle finger.

**1 Amp**

At building 4 axle line 1, a spindle nut runner operator was operating on the axle line when the Nut Runner machine detected a defect in the D80 axle and needed to be removed to be reworked. Employee 2 placed the hook from the load chain on the inner part of the tube and employee 1 (injured employee) placed the hook from the load chain on the opposite side. Employee one proceeded to guide the D80 axle that was already horizontal over to the rack used for parts that need reworked. Between the Line and the rework rack was another 6 Ft. rack (Red Rabbit Rack) with parts used to test the machine for function ability. Employee 1 lifted the part over the rack at about 6 ½ Ft. high. Employee 1 had his left hand holding the crane's pendant and his right hand on the top of the hub at the end of the axle with his fingers slightly on the inner edge. The load shifted as he guided the axle and the top of the hook smashed his right pinky finger on the dust shield attached to the hub

**1 Amp**

Employee was cutting gating off of an unfinished casting. Employee suffered an amputation to the left thumb

**1 Amp**

Workplace distal amputation-left index finger

1 Hosp

Employee was spraying oil on asphalt truck bed from 6 feet high platform and fell. Employee suffered concussion and broken bones.

1 Hosp

Colleague reached into an air lock. Employee suffered an avulsion on the right middle finger

1 Hosp

Employee climbed a tree in a right of way to cut some limbs off the tree. While moving locations in the tree employee fell approximately 35 feet to the ground. Preliminary investigation concludes employee was not properly connected to a repel line employee had placed in the tree prior to removing employees safety belt to move locations in the tree.

**1 Amp**

Employee was working on poly pack machine on the cutting blade. Employee did not hear the tech say all clear. Cycle started and employees left index finger tip was amputated1

1 Hosp

Team member was walking past a machine when material from machine fell on employee. Employee suffered a **broken right femur**

**1 Amp**

Allegedly a piece of profile became jammed in a fresh cut machine. Associate **tried to unjam the machine when the machine cycled** causing a **partial amputation**.

**1 Amp**

During the installation of a trailer nose, an associates **finger was caught under edge of nose**. In order to close the wound it required a **partial amputation**.

**1 Hosp**

Employee was standing beside forklift talking to the operator and a welding buggy backed into employee **fracturing their left femur**.

Driver slipped and fell **dislocating their shoulder**.

Employees were installing septic system when the wall caved in on two employees. **both employees were life lined to the hospital**.

**1 Amp**

Employee was **cutting a piece of trim at an angle and the off fall piece of trim was caught between the blade and the back stop** causing the trim to jump up. **Her left hand holding the trim was thrown up into the bottom of the blade**. **Laceration of thumb and loss of left 1st and 2nd fingers**.

**1 Hosp**

Employee is reporting that hurt their left knee trying to help one of the residents. Employee states that employee was trying to prevent a two person assist resident from having a fall and as employee was turning to stop the resident from moving another resident was coming aboard and employee turned and **hit their knee on the cart**.

**1 Amp**

While attempting to guide paper through a slitter section of the rewinder, employee **ran his finger through the slitter nip** resulting in **cutting the tip of his left middle finger off just past the start of the nail bed**.

**1 Amp**

Employee **smashed his finger on a metal binder on a machine**. **Employee left pointer finger on left hand had to reattached**

**1 Amp**

Employee was **observing a motor gear box for an oil leak**. Employee **hand was caught in the chain and got pulled into the gears**. Employees **middle right finger was amputated**.

**1 Hosp**

The employee was clearing the blow plate on cell #3 loramendi core machine. Employee was standing approximately 39 inches above the floor on a hopper. After completing the cleaning the employee was stepping down from the hopper and missed the bar on the back side of the hopper used as a step and **fell**, landing on employee's back.

Caller stated that the accident occurred due to a **traffic incident** at a construction zone.

**1 Amp**

Employee was **placing 20 foot piece of 3 inch diameter steel tube onto a rack and another tube on top of the rack** became dislodged and fell from rack. Employee **attempted to catch the falling tube** and it **caught his finger causing an amputation**.

**1 Amp**

Employees finger became entangled with a loose thread of a rotating buff and the **finger tip was amputated**.

**1 Amp**

Employee was **working with a co-worker changing a screw conveyor bearing** when his **hand was caught in a rotary valve**. Employee suffered **amputation to four fingers on right hand**

**1 Amp**

Employee was **bolting up a flange with a hydraulically powered torque wrench**. Employee's **left index finger tip was caught between the wrench and the backer nut**. Employee suffered **partial amputation to the left index finger tip**

**1 Amp**

Employee was **lifting a steel bar with a crane** and **failed to secure the load properly** resulting in the steel bar departing from crane rigging impacting the employees foot. Employee suffered **three broken toes and a partial amputation**.

**1 Hosp**

Laborer taking down hydro scaffold. metal frame that the hydro goes up was being disassembled. contractor was unaware that the bolts had been removed when he was climbing down the frame it came down on his head. Employee was transported to Community North.  
Employee was at least 5 ft high when the fall occurred  
at least 35 people

1 Hosp

Employee was repairing a light fixture when someone jostled the ladder. Employee was startled and touched something that shocked him. Employee fell from step ladder and **broke his ankle**. Employee was at least 9 ft up.

**1 Amp**

Employee was cutting a piece of wood on a table saw when his left hand slipped off the material and made contact with the saw blade. Employee suffered an **amputation of the left fifth digit down to the first knuckle**.

**1 Amp**

While trying to reposition a manual pallet jack employee got his small finger caught in between the frame of the pallet jack and the lowering/raising front tires

**1 Amp**

Associate was checking a swing used to lift a stamping dye. Swing continued to move catching the associates left hand ring finger between the swing and the dye. Employee suffered a **amputation to the left ring finger**.

**1 Amp**

Associate was cleaning machine rollers and was pulled into rollers causing an open fracture to the left ring finger. Employee suffered a **medical amputation**

**1 Amp**

Employee was cleaning a hopper and the wand on his pressure washer got caught in chunker blades. When employee reached into the machine to retrieve the broken off section of pressure washer wand his hand got caught between the running chunker blades and crushed right hand. Employee had **right hand surgically amputated**.

**1 Amp**

Employee was working on a piece of equipment and somehow got his hand caught in the auger which caused an **amputation**

**1 Amp**

Employee was working in a jack stand holding the wheel with his left hand. Employee was using a dead blow hammer when he missed the axel and hit his hand. Employee **left hand index finger was later amputated**.

**1 Amp**

Employee locked out the air handler unit computer and unit, and was checking the condition of the belts. The belts were free spinning slowly then began to spin faster. The employee stepped back, lost his balance, and reached for something to steady himself. The employee grabbed the unit belt and his hand was pulled into the belt pulley. The employee tried to pull his hand free but was not quick enough. The **machine cut off the top of his finger**.

1 Hosp

Employee was working the sterile department Servpro used disinfect oil which caused employees to be over sensitive to the fumes. Employee was hospitalized for observation

**1 Amp**

Elevator mechanic was closing the door operator manually with the power off and he pinched his left hand ring finger in the equipment. Employee suffered an **amputation**

1 Hosp

Employee slipped on the ice in the spare bus parking lot. Employee sustained **contusion on right elbow**.

1 Hosp

Employee **cut finger** on the underside of paper cutter while moving it.

1 Hosp

Forklift operator got left arm caught between forklift rear support post and tailgate of dump truck causing **fracture to upper left arm**

**1 Amp**

Employee was cutting panels on a table saw. Employee suffered **soft tissue amputation of 4th distal**.

1 Hosp

Employee was elevated in a Altec lift truck and contacted an energized cut out. The cut out was approximately 2400 volts and resulted in **second degree burns to his shoulder to his shoulder, thigh and shin**. Employee went unconscious for a few moments and coworkers lowered him to the ground ambulance arrived shortly after

**1 Amp**

Maintenance employee was **injured during machine repair**. Employee suffered **amputation of index and middle finger**

1 Hosp

Employee was driving an off road dump truck with in Ironstone subdivision when employee became disoriented. An ambulance was called by employer to assist medical treatment of employee. Employee was transported to hospital and treated for **severe dehydration**. Employee was released at approximately 6 pm and released to return to work. Employee stated that they hadn't eaten anything in over 24 hours. Water is available and provided to employee on daily basis on jobsite.

1 Hosp

Employee **twisted ankle and hit their head**. An ambulance was called employee was taken to hospital.

**1 Amp**

Associate was **unloading plastic sheet from extruder onto skid**. The associate **cut the tip of his right index finger off**.

1 Hosp

Concrete foreman lower left leg was caught under a concrete roller screed while smoothing out patches on I-69. Employee suffered a **fractured tibia and fibula**

1 Hosp

Moving a Colbert pipe and it kicked back and hit him on the elbow. Employee suffered a **cut and small fracture to the left arm**

**1 Amp**

Employee **cut off a quarter of his thumb off** with a meat saw

1 Hosp

Workers right hand lodged in the feeder roller of the machine in order to free up corrugated sheets when his gloved hand was caught and pulled into machine. Employees **right hand was de gloved**

**1 Amp**

Employee and their supervisor were **working on a saw to determine why it was leaving a burr on the parts**. The machine was put in manual operation so they could check to see if the vise in alignment. The supervisor manually opened the vise a couple of times, there was no additional communication between the two and the **vise jaws closed on the employees right index finger**. The employee was taken to the local emergency room.

Employee was diagnosed with a degloving and referred to the Indiana Hand and Shoulder Center for treatment. At Indiana Hand Center, rather than reconstructive work, the Employee **opted for an amputation of the tip of their finger**.

1 Hosp

An operator on Hunter Line #2 got **left arm caught in a pinch point** on a production machine.

1 Hosp

2 crew member onsite dragging vacuum truck hose through floor grates from the basement. The employee was on the second level pulling hose and hose was caught when pulled on it the hose handle hit the light switch on the second floor shutting off the lights. The employee **stumbled on the hose lying behind feet backside hit the edge of the opening in the floor and body flipped over and through the open floor grate**.

1 Hosp

Turret pushed a pallet jack which in turn hit inventory racking, which in turn hit employee's **left ankle**.

1 Hosp

Two employee were transporting a bush by using a backhoe down a hill for disposal. The grass was wet and the backhoe flipped on its side. Employee sustained **head injury, broken ribs, possible punctured lung**.

**1 Amp**

Employee **smashed finger**. Employee was manually loading an axle tube to a continental tube cutter through a guide when incident occurred.

1 Hosp

Right middle finger amputation

The employees right index finger, middle finger and ring finger were pulled in the nip point and crushed. The tip of the index finger and middle finger were fractured. As the operator pulled back on his hand to free himself, the bone at the tip of his right middle finger broke through the skin. This was repaired in the emergency room and sutures were applied to close the wound. The operator had a follow up appointment with the hand specialist on 11/20/17 where it was determined gangrene had set in and the tip of the right middle finger needed to be amputated. The surgery was scheduled for 11/21/2017 at 11:00 am.
